

Weekday 5 Assignment

Assigned: December 21, 2018

Due: December 24, 2018, start of class.

Sams Club Coding Challenge Review

Attached is a submission a consultant had performed over the course of a weekend for an interview. The project, files he had prepared, and resources necessary are all included.

In addition, attached is a Word document describing the challenge and an rtf file describing the reasons it was rejected.

He'd spent a weekend already on it, and we'd made some additional changes ourselves before turning it over to you.

Your assignment is to take this coding sample, analyze the codebase, identify the problems in question and effectively fix them.

As well, this is a submission to an end-client. They are looking to be impressed. Add an additional feature or two to improve what is already here, reorganize the codebase to MVVM, add offline persistency, etc.
